

Deakin Building Classification

The Deakin Building Classification scheme provides a means for Deakin to identify how best to design its ICT networks. It is based on several criteria:

1. The type of communications rooms in a location (for example, the presence of a datacentre, major communications room or distribution node),
2. The number of people located in the building,
3. Any special functions performed in the building such as lecture theatres or business spaces.

The outcome is a rating of ICT impact in cases of service outage; Gold (high impact) Silver (lower impact), and Bronze (lowest impact). This then serves as a guide for considering any works on a particular building.
